First Reading easy!

Vol. 14 Discover our Earth

Earth is our place in the universe. Plants, living creatures and the earth itself have been developing for millions of years. The continental plates, the salt and fresh water, the atmosphere - everything is changing. Beginning readers learn how the earth is structured, what continents and oceans there are and how volcanoes are formed. How does the earth fit into the solar system and what is the significance of the moon? With beautiful pictures, large print and simple sentences, learning to read is really fun. At the end of each chapter, a reading quiz shows whether the reader has understood what they have read. A cute character guides the children through the book and motivates them to read for themselves. For a great "I can read this on my own" feeling for children aged 6 and up who are just learning to read.

Title Information

Category:	First reading book series
Age range:	6+ years
Series:	16 volumes
Artwork:	With many photos and illustrations
